BOTTLES & FLASKS
INNOVATIVE CERAMIC

DESIGN AND INNOVATION

Thanks to its unique and highly specialised skills, REVOL is a laboratory of ideas where technology and design are closely intertwined. Today a symbol of strategies for constant innovation, **REVOL** brings together a team of experts composed of technicians and designers that endeavour to create clays, colours, shapes, and always more innovative effects.

This guarantees our partners to stand out in the markets of spirits, fine wines, liqueurs, or perfumery, for example, **with premium, super, and extra premium products.**

REVOL TECHNICAL CERAMIC

Reputed for its numerous technical benefits, REVOL ceramic is the ideal material to best preserve the **organoleptic qualities** of liquids, and guarantee optimum food safety*.

Made from natural mineral components fired at extremely high temperatures (over 1320°C / 2408°F), our top-of-the-range ceramic is in fact porcelain. It is completely non-porous, opaque, and inert:

- its rate of porosity is zero,
- its opacity avoids "lightstruck flavour",
- being an inert material, it is a completely **neutral** product, both for the liquids it contains and for the environment.

Its unrivalled composition and high firing temperatures bestow upon its unique **mechanical resistance.**

* Respects international food safety standards (NF EN 1388-1 / AS-NZS 4371 / JIS S 2401 / FDA / PROPOSITION 65 / NOM-010-SSA1)

FLEXIBILITY IN PRODUCTION

Rich from near 250 years of unique expertise in ceramic production, REVOL is today a renowned enterprise in which **expert human hands** work in concert with cutting-edge technology.

From small collections, requiring mainly manual work, to larger ones requiring automated work to produce hundreds of thousands of pieces, **REVOL will adapt to your demand.**

Unlike for glass, the **cost of tools** for the production of bottles and flasks in REVOL ceramic is **very affordable.** With a minimum of 2 000 pieces, we can conceive and produce exclusive and entirely personalised items at competitive prices. It is a unique opportunity for you to distinguish yourself on very competitive markets.

QUALITY MANAGEMENT

- Inspection of the raw material's properties
- Visual inspection at each stage of production, and inspection by camera of the interior of bottles
- Final extensive inspection of the lot in laboratory
- Documentation and audit of the process
- Use of animated performance for continuous improvement.

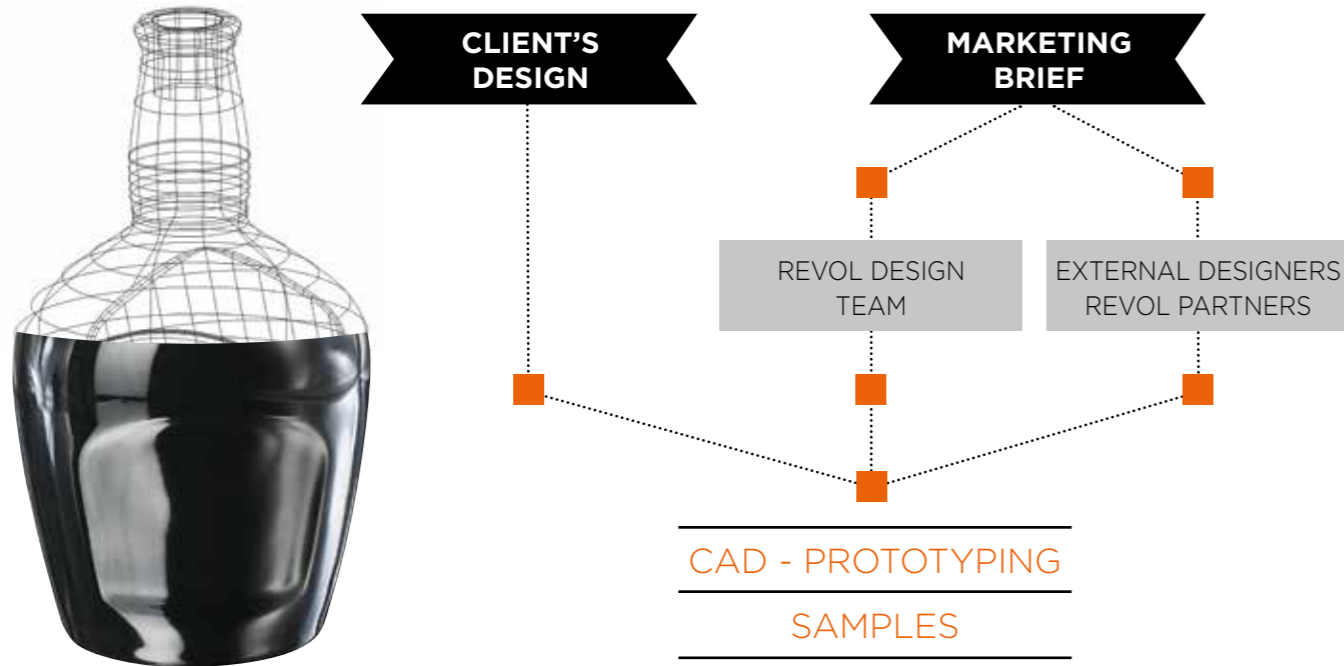

RESPECT FOR THE ENVIRONMENT

Solicitous to preserve its environment, REVOL has implemented an eco-responsible plan at the heart of its factory and in its approach to commercialization. Recycling industrial waters and the heat from the kilns, treatment of sewage, waste repurposing, low-energy firing... These are some proofs of REVOL **active participation in sustainable development.**

CUSTOM-MADE SHAPES

Whether your project is a CAD file ready to be prototyped or a simple idea, REVOL creative team is there **to imagine, give shape to, and actualize your most audacious projects.**

PERSONALISATION OF COLOURS

REVOL is one of the rare porcelain producers in Europe to make its **own natural colors and enamels.**

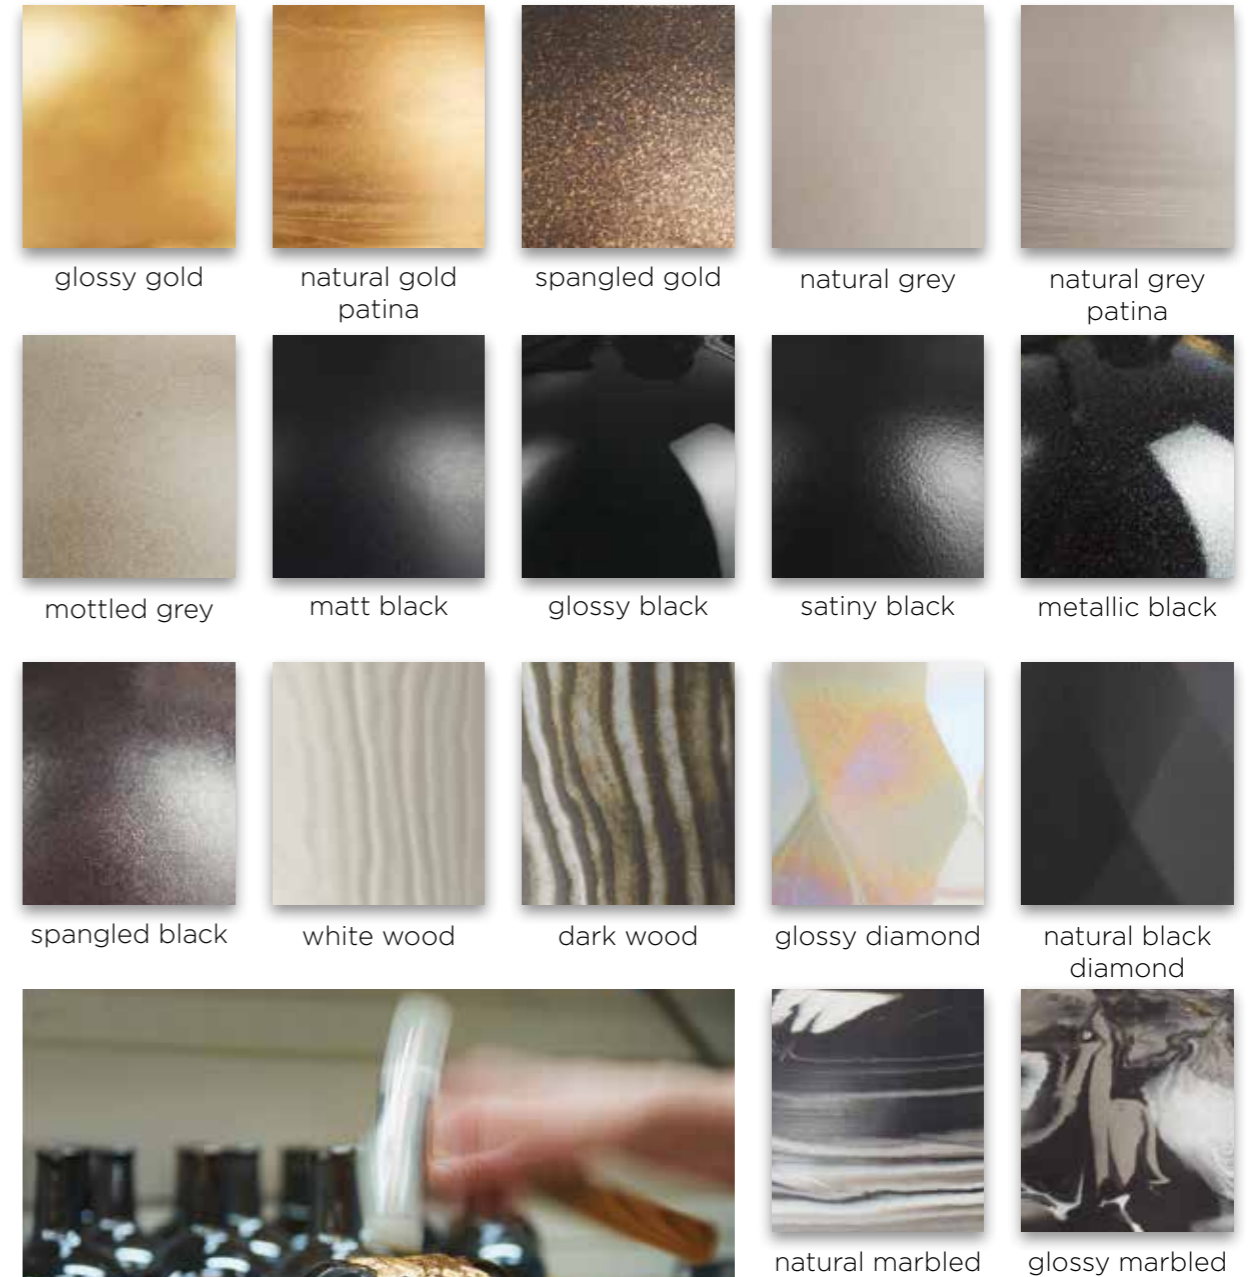

This knowhow means a unique freedom that opens an infinity of possibilities of custom-made creations.

Colour-testing research in laboratory

CHOICE OF EFFECTS, DECORATION, AND BRANDING

Through its work with materials and shapes, through the use of natural pigments in the clay and enamel, REVOL offers innumerable possibilities of finishes and effects. Associated with different techniques of decoration and branding, each bottle will forcefully express its unique character. REVOL is here to accompany you and **create your model with you.**

< Addition of a metal engraved plate

The colours, effects, decorations and branding shown above are only a glimpse of the multiple possibilities.
